

## Ligasil<sup>®</sup> 38

## Inorganic binder based on special alkali silicate

Chemical description	Ligasil 38 is an inorganic binder based on especially modified sodium silicate without any volatile organic additives.
Mode of action	Due to its special composition the application of Ligasil 38 together with inorganic inert substances results in stable high strength bonds. In combination with suitable hardeners water permeable soils can be stabilised or sealed.
Specification (average values)	Dry content:approx. 36,0 %007 *)Density (20°C):approx. 1,35 g/cm³042 *)pH (10 %):approx. 12008 *)Viscosity (20°C):approx. 65 mPas053 *)Appearance:clear to slightly opalescent liquidSolubility:miscible with waterOdour:almost none*) Internal method code – description available on request
Properties	<ul> <li>stable, alkaline liquid,</li> <li>good wetting properties, especially on inorganic and mineral substances,</li> <li>can be cured by organic or inorganic hardeners, acidic gases (e.g. CO<sub>2</sub>)</li> </ul>
	<ul> <li>or higher temperatures,</li> <li>in combination with special hardeners water stable bonds can be achieved.</li> </ul>
Application	<ul> <li>base material for the preparation of hard and soft gels for chemical grouting / soil solidification,</li> </ul>
	- setting accelerator in shotcrete.
Note	Ligasil 38 is only classified as slightly hazardous to water (according to German water hazard class regulations). During application or by heat impact no hazardous gases or decomposition products are evolved.
Storage	Ligasil 38 must not be stored in aluminium or galvanized containers. Protect from frost. The containers must be kept tightly closed. Storage stability at least 12 months.
Labelling / Safety	Please see safety data sheet.
Packaging	Container Road tanker
